ABOUT ME

Final-year AI & Machine Learning engineer (CGPA 8.03/10) building ML systems end-to-end — from a Kalman-filter research collaboration with MIT Manipal to personal projects like ClauseGuard and CyberShield AI. National hackathon winner with proven experience leading cross-functional teams.

TECHNICAL SKILLS

Languages: Java, C, Python

ML & NLP: Scikit-learn, TensorFlow, Speech Recognition, NLP, Text Summarization, Feature Engineering

Data & Visualization: Pandas, NumPy, Data Cleaning, Power BI, Tableau

Tools & Platforms: Git, GitHub, VS Code, Jupyter Notebook, Google Colab, MongoDB, Flutter

Leadership & Delivery: Team Leadership, Agile Collaboration, Stakeholder Coordination, Risk Management

PROJECTS

Parameter Identification of CSTR Using Unscented Kalman Filter | *MIT Manipal collaboration — Ongoing*

- Achieved 99.97% parameter-identification accuracy ($R^2 = 0.9997$) on a lab-scale reactor by implementing a Constrained Unscented Kalman Filter and Neural-ODE deep learning models in Python.
- Advancing Phase II of the project by studying deep-learning predictive-control research to extend the identified model into a stability-certified reactor controller.

ClauseGuard — AI Contract Red-Flag Detector | *Personal Project*

- Achieved a 0.869 average F1 score (peak 0.911) across 7 risk-category classifiers by training TF-IDF and Logistic Regression models on the 510-contract CUAD legal dataset.
- Built an end-to-end contract-risk analysis platform by engineering a FastAPI backend with JWT-secured authentication and a scikit-learn inference pipeline.

RFID-Based Surgical Sponge Tracking System | *Team Lead, Karnataka NAIN 2.0 — Ongoing*

- Leading development of an RFID-based patient-safety device that detected unaccounted surgical sponges in the majority of test trials, by authoring requirement docs and creating a team onboarding guide.

CyberShield AI — Phishing & Threat Detection Platform | *Personal Project*

- Achieved 99.4% accuracy detecting malicious URLs by training a Scikit-learn LinearSVC classifier on 500,000+ labeled URLs, then built a full-stack React/Flask platform with OCR scanning and a multilingual Gemini chatbot.

EDUCATION

Shri Madhwa Vadiraja Institute of Technology and Management, Udupi

B.E. in AI & Machine Learning; CGPA: 8.03/10 (2023–Present)

City Montessori School, Mahanagar, Lucknow

ISC (12th) & ICSE (10th)

CERTIFICATIONS & ACHIEVEMENTS

- Winner, Google Build with Gemma Hackathon, organized by Kaggle at MS Ramaiah College, Bengaluru (2026).
- Winner, “Reality Rewritten” National-Level Hackathon, Nitte (Deemed to be University) (2025).
- 2nd Place (Team Lead), Hack.Algo National Blockchain Hackathon, Reva Rift x GDG on Campus (2026).
- Finalist, IEEE EU-Reka 2024 National-Level Tech Summit — Vice President, ACM Student Chapter — Core Team Member, HACKOTSAVA (200+ registrations, 25+ institutes).
- Certifications: Stay Ahead of the AI Curve (Google & Coursera); Smart Tech with IoT (SMVITM).
